

Profile of a Typical Upper-Class KAMSC Student

Should I apply to the KAMSC Program?

The decision is often not an easy one. The information listed below represents a composite of most of the students in the KAMSC program but in no way represents a definitive and exclusive set of qualifiers. The items are presented as a means for you to compare student qualifications with those that fit the profile of a typical KAMSC student. If you have questions or would like further explanation on any of the below items, please contact us.

Typical students in the program have:

- above a B average in math, science and English classes in high school;
- combined scores higher than 72 out of 100 on the KAMSC entrance exam.

While these items are consistent with most of the students enrolled at KAMSC, there are exceptions. In addition to these items, the Applicant Review Panel also considers: student responses to the application questionnaire; student writing samples; teacher recommendations and evaluations of student performance; and characteristics of success such as self-motivation and responsibility.

Please do not treat the items listed above as required standards for acceptance. They are provided for guidance purposes only.

NOTE: Students must be enrolled in a Geometry or higher-level math class during their 9th grade year, an Algebra II or higher-level math class during their 10th grade year, or a Pre-calculus or higher-level math class during their 11th grade year.
